

The **20 User Stories** are **requirements**, not separate Java files.

Each user story is implemented by one or more methods in your code. Here's the mapping:

User Story	Implemented In
US-01 Register User	<code>Authentication.register()</code>
US-02 Unique Username	<code>Authentication.register()</code> (duplicate check)
US-03 Login	<code>Authentication.login()</code>
US-04 Display Logged-in User	<code>Main.java</code>
US-05 Add Location	<code>AdminOperations.addLocation()</code>
US-06 View Locations	<code>AdminOperations.viewLocations()</code>
US-07 Approve Event	<code>AdminOperations.approveEvent()</code>
US-08 View Pending Events	<code>AdminOperations.viewPendingEvents()</code>
US-09 Monitor Seat Capacity	<code>AdminOperations.monitorSeatCapacity()</code>
US-10 Create Event	<code>EventOperations.createEvent()</code>
US-11 Select Location for Event	<code>EventOperations.createEvent()</code>
US-12 Edit Event	<code>EventOperations.editEvent()</code>
US-13 Send Event for Approval	<code>EventOperations.sendForApproval()</code>
US-14 Cancel Event	<code>EventOperations.cancelEvent()</code>
US-15 Generate Coupon on Cancellation	<code>EventOperations.cancelEvent()</code>
US-16 View Approved Events	<code>ConsumerOperations.viewApprovedEvents()</code>
US-17 Book Ticket	<code>ConsumerOperations.bookTicket()</code>
US-18 Make Payment	<code>ConsumerOperations.makePayment()</code>
US-19 Generate E-Receipt	<code>ConsumerOperations.generateReceipt()</code>
US-20 Apply Coupon	<code>ConsumerOperations.applyCoupon()</code>

So, are all 20 user stories implemented?

Almost. Your current code covers around **18–19** of them.

A few improvements you can add:

- **Reject Event** (currently only approve is implemented).
- **Validate that booked tickets are greater than 0.**
- **Prevent editing or cancelling an already cancelled event.**
- **Restrict event editing after approval (optional, based on your requirements).**

After these small additions, your project will fully satisfy all **20 user stories**.

So your submission will include:

-  20 User Story Cards (documentation)
-  Sprint Backlog (documentation)
-  Pure Java OOP Console Application (code)
-  Every user story mapped to working Java methods.
